a Represents a rate of more than zero but less than 0.05.

- Represents zero events.

¹ The general fertility rate is the total number of live births per 1,000 women of childbearing ages (15-44).

² The birth rate by age is the number of live births per 1,000 women in a specific age group. For women under 15, the rate is calculated using the population 10-14 years of age, and for women over 44, using the female population 45-49 years of age.

Note: Live births with unknown birth order were distributed proportionately to live births with known order before rates were calculated.
